TAHSIN UMME HANI

UI/UX DESIGNER

+8801625394251 tahsin.hani@gmail.com linkedin.com/tahsin-hani tahsinhani.github.io/portfolio

PROFILE

Designer with 6 years in the design industry, including the last 3 years focused specifically on core UI/UX for web, mobile, and SaaS products. Starting in graphic design in 2020, made the move into UI/UX in 2023 at Roxnor, then stepped into a full-time, dedicated UI/UX role at Astha IT in late 2024. Currently designing across AI platforms, an international school's admin system, and a smart access control product, handling research, wireframes, and screen-level design before working with developers to ship it. Genuinely passionate about modern design and where technology is headed, and equally comfortable working solo or leading a small team through a full design process, even under tight deadlines.

SKILLS

UX & Product Design: User Research · User Flows · User Personas · Information Architecture · Wireframing · Prototyping · Web & Mobile App Design · Responsive Design · Accessibility · Visual Hierarchy · Design Principles · Accessibility (WCAG basics)

Visual & Brand Design: Concept Sketching · Typography · Logo Design · Print Design · Social Media Design

Tools: Figma · Adobe XD · Adobe Illustrator · Adobe Photoshop · Miro · Jira

Markup: HTML · CSS

WORK EXPERIENCE

UI/UX Designer I | Astha IT — Dec 2024 - Present

- Take a project from a blank file to a client pitch - competitive research, journey maps, information architecture, wireframes, then the screens themselves. How deep I go into each depends on what the project actually needs.
- Present the work to clients myself. Most of them don't just want to hear that it looks good, so I walk them through why a flow is shaped the way it is and what it's doing for their users.
- Get handed domains I've never worked in and dig until I understand the user's problem better than the brief does, then build the journey so the easy path is also the right one.
- On redesigns, make a product feel current without shifting the ground under people who already know how to use it.
- Make sure the team stays ahead of where AI is taking design, not just keeping pace with it. Our ideation phase largely runs on AI now (mostly Figma Make, and Claude for research), which gets the early rounds done fast and leaves the real design decisions to us.

Selected projects

- Docomate.ai - Designing the UI for an AI tool that pulls data out of documents and turns it into structured, templated output. Handling most of the core workflows and screen-level design myself.
- SumoSum - Built the interface for a platform that turns a rough business idea into a financial forecast — the main challenge was making a pretty technical process feel approachable.
- Keystone Academy Scheduler - Designed the scheduling and resource-allocation screens for an international school's admin system, working closely with staff to match how they actually plan their day.
- Worked on Caboodle, Collably, and Payra Port Smart Access Control System, Revamp work for brands, refreshed the visual language and interface while preserving the user journeys their existing customers already knew.

Graphic & UI/UX Designer | Roxnor (formerly Xpeedstudio)

Nov 2022 - Nov 2024

- Joined as a graphic designer and moved into UI/UX on the company's own products, working on both sides of the job for most of the two years. This is where my product design work started.
- Designed interface and screen-level work for the product, alongside the marketing side of the role.
- Made blog banners, YouTube thumbnails, and social graphics for Instagram, Facebook, and LinkedIn as part of the product's regular content output.
- Worked with the marketing team to keep the visual and interaction design consistent across the product.

Graphic Designer | SourcecodeBD

Nov 2021 - Oct 2022

- Designed marketing material for blogs, social media, YouTube, and email - a wide mix, so brand consistency mattered a lot.
- Worked with the marketing team on campaign assets like posters, flyers, and digital ads.

Graphic Designer (Intern) | SharpnerBD

Apr 2021 - Oct 2021

- First real design job - learned photo manipulation and how to keep visuals consistent with a brand's existing look.
- Made promotional banners and social graphics that helped grow engagement on the accounts I worked on.

Freelance Graphic Designer | Self-Employed (Fiverr, Upwork)

2020

- **Level 1 Seller on Fiverr** - earned the tier by keeping order completion, on-time delivery, and client ratings consistently high.
- Took on branding, print, and social media work - logos, flyers, posters, and campaign graphics.
- Ran each project end to end: read the brief, asked what it left out, designed, handled revisions directly with the client, and delivered the final files.
- Named **Highest Earner** in the Learning & Earning Development Project (LEDP), a digital-skills program run by the ICT Division of the Bangladesh government.

LIVE PROJECT

Blood Connect (Open Source) - contributed UI/UX design to an open-source blood donation platform.

EDUCATION

BSc in Electronics and Communication Engineering | Institute of Science and Technology 2021

Higher Secondary Certificate | Dhaka City College 2014
